Summary

Full Stack Web Developer with 2+ years of experience building scalable, responsive web applications using the MERN stack. Proven ability to design and deploy production ready solutions, building RESTful APIs, and implement real time features with Socket.io. I enjoy solving problems, learning new tools, and turning ideas into working products that users actually enjoy using.

Experience

National Telecommunication Institute (NTI) - UI/UX Design Internship July 2025 - July 2025

- Completed a one month internship covering the full UI/UX design process from user research.
- Designed over 3 UI/UX projects, including more than twenty screens for both mobile and web.
- Worked extensively with Figma and applied design principles to create intuitive and accessible layouts.

Information Technology Institute (ITI) - Web Development using React.js Internship June 2025 - July 2025

- Participated in an intensive summer program focused on modern web development with React.js.
- Built single-page applications using components, state management, and integrated RESTful APIs.
- Gained hands-on experience applying best practices in frontend development and code organization.

MediCapital Group - Full Stack Web Developer (Remote Internship) January 2024 - July 2025

- Created E-Cars platform using MERN Stack, serving over 1,000+ visitors monthly.
- Integrated core features like payment integration, real time chat, and analytics dashboard.
- Developed a smooth, user-friendly interface that attracts hundreds of users every week.
- Handled the entire development process independently from start to deployment.

Education & Courses

New Cairo Technological University 2024-2028

Bachelor of Technology - BTech, Information Technology

Misir International Computer & Ai Academy 2021-2024

High Technical School Diploma In Computer Programming

Route Academy 2023-2024

Full Stack Web development diploma

Skills

Languages & Tools: JavaScript, TypeScript, HTML5, CSS3, SCSS, Git, GitHub

Frontend: React.js, Redux, Next.js, jQuery, Bootstrap

Backend: Node.js, Express.js, Nest.js, Socket.io, GraphQL

Databases: MongoDB, MySQL, Oracle SQL, Oracle PL/SQL

Personal Skills: Flexibility, Creative Thinking, Calm Under Stress

Top Projects

E-Cars

Launched a complete electric vehicle (EV) platform customized for the Egyptian market, serving over 5,000 users since launch. Implemented multiple functional modules across the platform, including:

- **Rolled out vehicle listings** enabling over 500+ daily visitors to browse and post new EVs.
- **Introduced an auction system** allowing users to participate in real-time auctions.
- **Released a rental service** with live listings of EVs available for rent.
- **Added a request feature** enabling users to submit custom requests for EV purchases or rentals.
- **Integrated real-time EV news** to keep users informed on market trends.
- **Mapped nearby charging stations** using location based services.
- **Introduced structured community forums** for discussions, support, and knowledge sharing.
- **Established an accessory marketplace** for buying and selling EV related items.
- **Listed verified service centers** with filtering by region and specialty.
- **Showcased showrooms** with available stock and offers.
- **Partnered with financial providers** to offer installment plans and insurance services.
- **Integrated real-time chat system** for direct communication between users and listing owners.

Technologies: React.js ,Node.js, Express.js, Socket.io and MongoDB

Green Guide

Designed and developed a complete business directory platform covering all Egyptian governorates. Integrated core functionalities that supported the system's main operations, such as:

- **Architected the complete backend** powering both the mobile app and web platform.
- **Crafted a responsive frontend** with structured navigation.
- **Set up an admin panel** with full control over companies, guides, categories, and jobs used to manage over 300+ listings.
- **Established a company self registration system** enabling admin review, approval and editing.
- **Programmed a search engine** that filters based on where and what the user is searching.
- **Integrated location tracking** to calculate distances and display directions on the map.
- **Optimized a sorting method** to display companies by plan, distance, and latest updates.
- **Integrated real-time notifications** using Firebase for job updates and admin alerts.
- **Built a targeted ad display system** showing company ads on specific pages based on plan.

Technologies: React.js ,Node.js, Express.js, Firebase and MongoDB
